

**Amendments to the Specification:**

Please add the following new paragraph on column 3, between lines 29 and 30:

The previously described alternative embodiment, where the energy transfer unit is positioned internally in a pylon is shown by the arrow to the broken line box in the Figure. As shown inside the broken line box, the pylon 4 is hollow in its interior such that the transformer 22 is inside of and fixed internally to the pylon 4 by the platform 32.
